

# The Hidden Risk of OSS

## The Dawn of Software Assembly

# The Language of Security is Risk

# WHAT IS RISK

---

+

=

**“...WE OWE A DUTY OF  
REASONABLE CARE TO  
OUR NEIGHBOR”**

Lord Atkin: Donoghue v. Stevenson (1932)

“...a manufacturer of products, which he sells in such a form as to show that he intends them to reach the ultimate consumer in the form in which they left him with no reasonable possibility of intermediate examination, and with knowledge that the absence of reasonable care in the preparation or putting up of products will result in an injury to the consumer's life or property, owes a duty to the consumer to take that reasonable care.”

“IT (BUICK) WAS NOT AT LIBERTY TO PUT THE FINISHED PRODUCT ON THE MARKET WITHOUT SUBJECTING THE COMPONENT PARTS TO ORDINARY AND SIMPLE TESTS....THE OBLIGATION TO INSPECT MUST VARY WITH THE NATURE OF THE THING TO BE INSPECTED. THE MORE PROBABLE THE DANGER, THE GREATER THE NEED OF CAUTION.”

MacPherson v. Buick Motor Company,  
217 N.Y. 382, 111 N.E. 1050 (1916)  
Justice Benjamin N. Cardozo

**“...IF THE PROBABILITY BE CALLED P; THE INJURY, L; AND THE BURDEN, B; LIABILITY DEPENDS UPON WHETHER B IS LESS THAN L MULTIPLIED BY P: I.E., WHETHER  $B < PL$ ”.**

***United States v. Carroll Towing Co.***  
159 F.2d 169 (2d. Cir. 1947)

Translation: If the Cost of Protecting Against Harm is less than the Cost of the Damage Multiplied by the Likelihood of the Damage, then there is **negligence**.

**Risk = probability x impact**

Security concerns are across the Enterprise

Development	Operations	Security
Features	Performance	Security
Usability	Reliability/Scalability	Compliance
Performance	Compliance	Everything Else
Reliability/Scalability	Security	
Maintainability	Maintainability	
Security	Features/Usability	
Compliance		

Prevention	Detection	Monitoring
Firewall	IDS	SIEM
Encryption	SAST	DAM
IPS	DAST	RAST
WebApp Firewall (WAF)		

Evolution of Spend

Figure 1. Magic Quadrant for Dynamic Application Security Testing

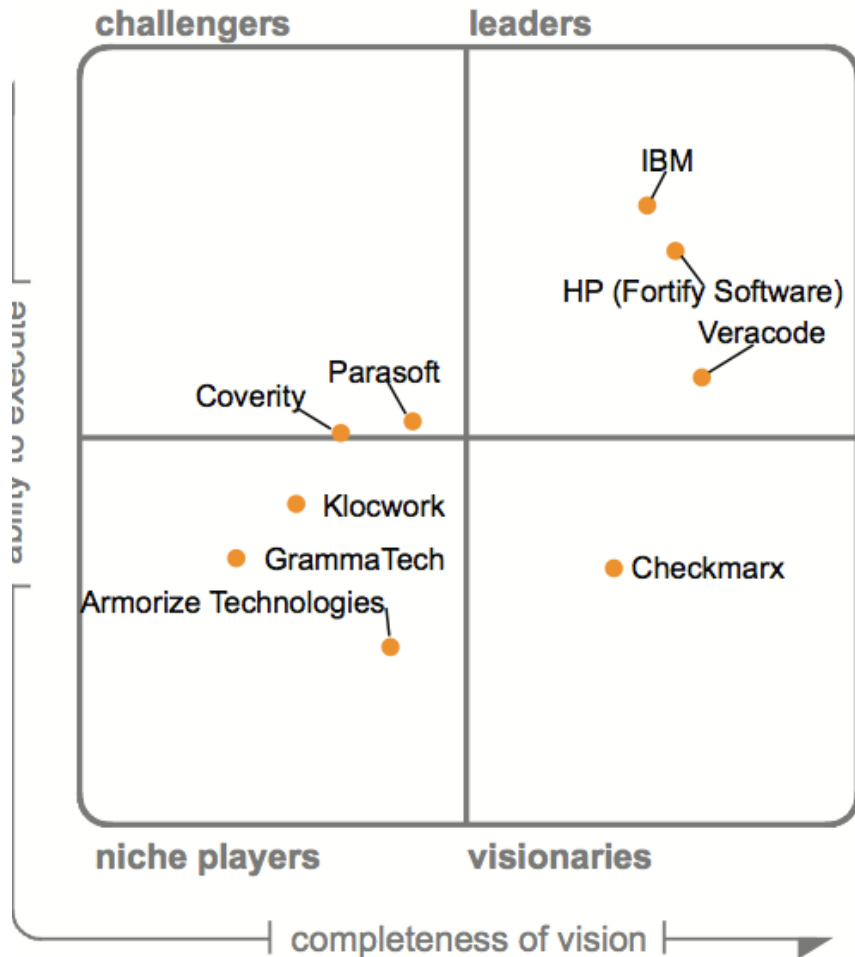

Source: Gartner (December 2011)

- DAST is a very mature market, but is focused primarily late in the development cycle and not integrated into development.
- Pros
  - Finds exploitable issues
  - Mostly language agnostic
  - Finds some infrastructure issues
- Cons
  - Often requires complex configuration
  - Accuracy drops for non-reflected issues
  - Used late in SDLC

Figure 1. Magic Quadrant for Static Application Security Testing

As of December 2010

Source: Gartner (December 2010)

- SAST is a mature market, but is under represented outside of financial, health/insurance and retail markets.
- Pros
  - Can be leveraged early in the development lifecycle
  - Can find issues not found using any DAST
- Cons
  - False Positives
  - Requires security training to use effectively.
  - Scanning varies from hours to days for large applications.

- Over the past decade there have been two predominant security technologies focused at application security.
  - DAST – Dynamic Application Security Testing (Blackbox)
  - SAST – Static Application Security Testing (Whitebox)
- Over the last couple of years a third has emerged but has not gained significant adoption
  - RAST – Runtime Application Security Testing (Glassbox)

Development must change

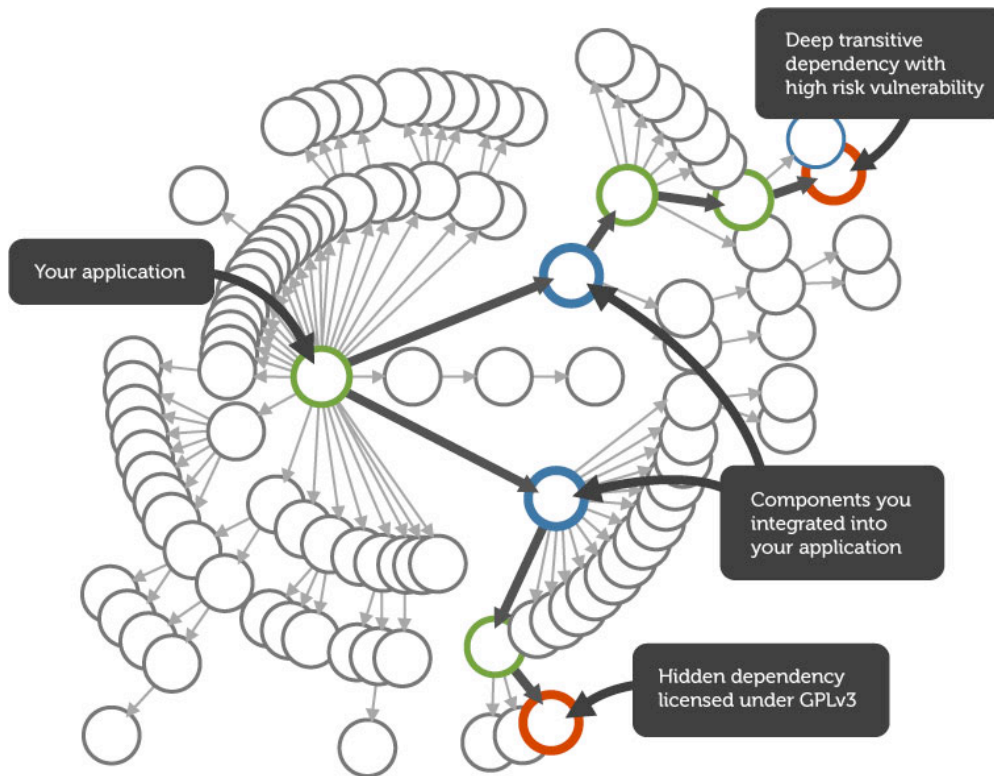

## Usage of OSS in large enterprises

It's no longer a question of whether you use OSS, it's how many components are being used & where

- Discovering a security issue is half the battle
- Transitive and hidden dependencies make it extremely difficult to assign responsibility to propagate fixes throughout the component chain

## Complexity

One component may  
rely on 00s  
of others

## Diversity

40,000 Projects  
200MM Classes  
400K Components

## Volume

Typical Enterprise  
Consumes  
000s of  
Components Monthly

## Change

Typical Component  
is Updated 4X  
per Year

Release	Release Date	Dependencies
Struts 2.3.3	16 April 2012	
Struts 2.3.1.2	22 January 2012	
Struts 2.3.1.1	20 December 2011	SI-009
Struts 2.3.1	22 December 2011	SI-009, Nelly SI-009
Struts 2.2.5.2	7 September 2011	Nelly SI-005, SI-008
Struts 2.2.5.1	7 September 2011	SI-005, Nelly SI-005, SI-008
Struts 2.2.1.1	20 December 2010	SI-005, Nelly SI-005, SI-008, SI-009
Struts 2.2.1	18 August 2010	Nelly SI-005, SI-005, SI-008, SI-009
Struts 2.1.8.1	18 November 2009	SI-005, Nelly SI-005, SI-007, SI-008, SI-009
Struts 2.1.8	30 September 2009	Nelly SI-005, SI-005, SI-007, SI-008, SI-009
Struts 2.1.6	5 January 2009	Nelly SI-005, SI-005, SI-007, SI-008, SI-009
Struts 2.1.5.4	24 November 2008	Nelly SI-005, SI-005, SI-007, SI-008, SI-009
Struts 2.1.5.3	20 October 2008	Nelly SI-005, SI-005, SI-007, SI-008, SI-009
Struts 2.1.5.2	22 June 2008	SI-005, SI-005, Nelly SI-005, SI-005, SI-008, SI-007, SI-008, SI-009
Struts 2.1.5.1.1	2 March 2008	Nelly SI-005, SI-005, SI-005, SI-008, SI-007, SI-008, SI-009

Struts 2.0.9	24 July 2007	Nelly SI-005, SI-005, SI-005, SI-008, SI-007, SI-008, SI-009
Struts 2.0.8	12 June 2007	SI-005, Nelly SI-005, SI-005, SI-008, SI-007, SI-008, SI-009
Struts 2.0.6	22 February 2007	SI-005, Nelly SI-005, SI-005, SI-008, SI-007, SI-008, SI-009

# Anatomy of a component based ATTACK

(External Deck)

# No Visibility

No visibility to what components are used,  
where they are used and where there is risk

# No Control

No way to govern/enforce component usage.  
Policies are not integrated with development .

# No Fix

No efficient way to fix existing flaws.

**46**  
**Million** Insecure downloads in 2012

**18**  
**Thousand** organizations downloaded Struts framework with "severe" security flaw

**4**  
**Thousand** organizations downloaded Struts 1.x with known security flaws

Extended Software Supply Chain

**46 million** insecure component downloads in 2012

Enterprise Software Factory

**90%** of repositories contain at least one **Critical** vulnerability in their direct dependencies

Production Apps

**71%** of applications contain **Critical** or **Severe** security flaws

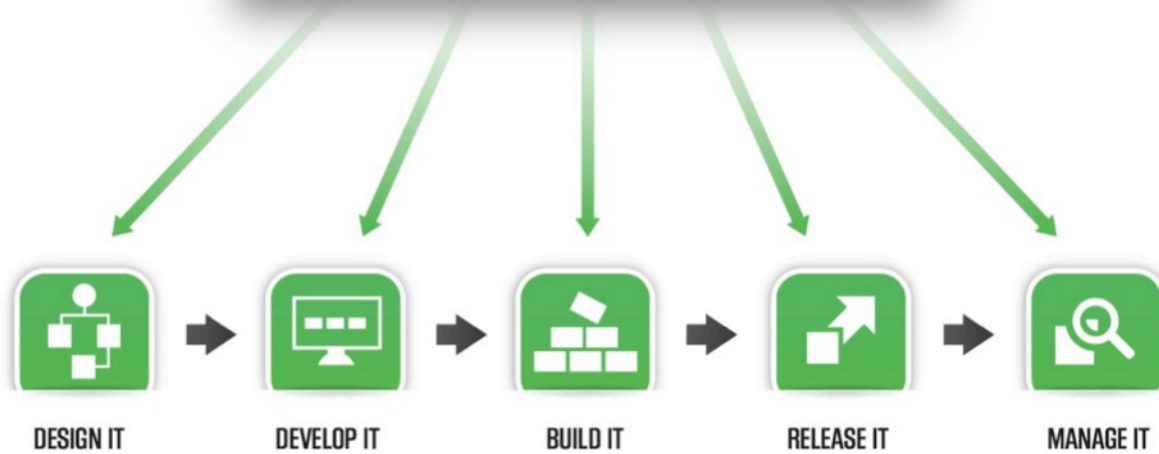

- When our software development ecosystem looks like this it is easy to find problems
- The real challenge is to develop at scale and deliver continuous value continuously when everything else is a mess

GO FAST, BE SECURE

---

“Haven’t I heard this story before?”

# Component Lifecycle Management

1

## Secure Consumption

with the use of certified components & integrity checking throughout the lifecycle

2

## Govern Development

to ensure policy compliance without disrupting developer productivity

3

## Profile Exposures

to proactively identify and prioritize action

4

## Remediate Risk

by preventing & quickly fixing security & IP vulnerabilities

5

## Monitor Threats

in production applications to ensure continuous trust in critical operations

**Q** How do you choose components to include in your application?

**A** Thoughtfully select and identify components using quality, security, and licensing information.

**Q** How do your developers know what components to use, and when they should upgrade?

**A** Provide your team with real-time information and updates directly within the tools they use every day.

**Q** Do you monitor and control what makes it into a build?

**A** Enforce policy through your build and continuous integration infrastructure.

**Q** Do you know your full bill of materials?

**A** Develop and maintain component inventory for every application.

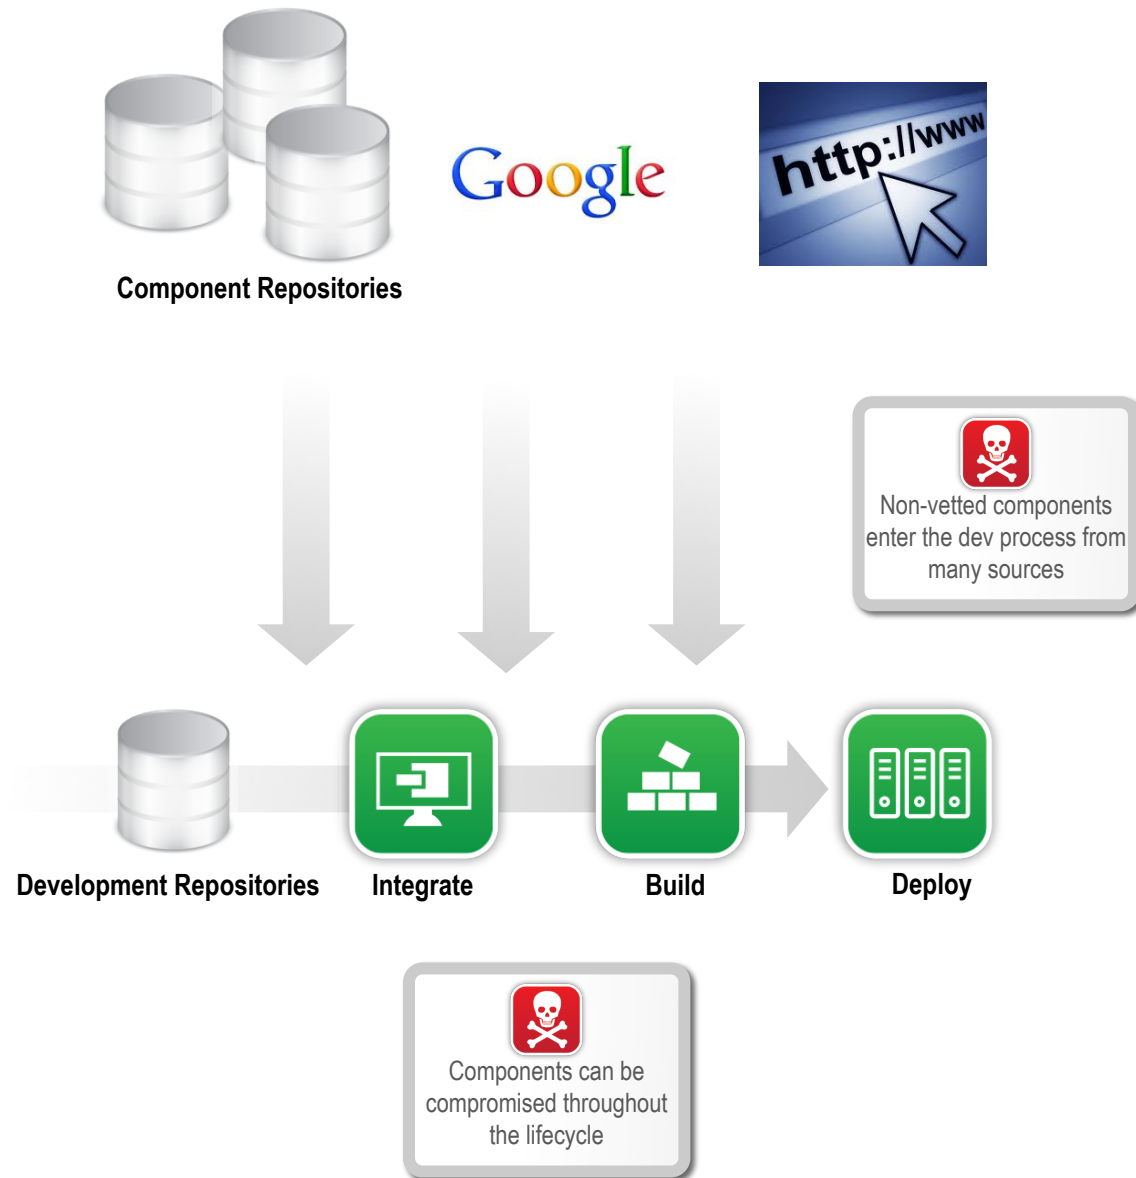

**Q** Do you know when vulnerabilities are found in deployed components?

**A** Monitor component bill of materials for new security flaws and identify applications for critical updates.

**Q** Do you have global visibility into open source usage?

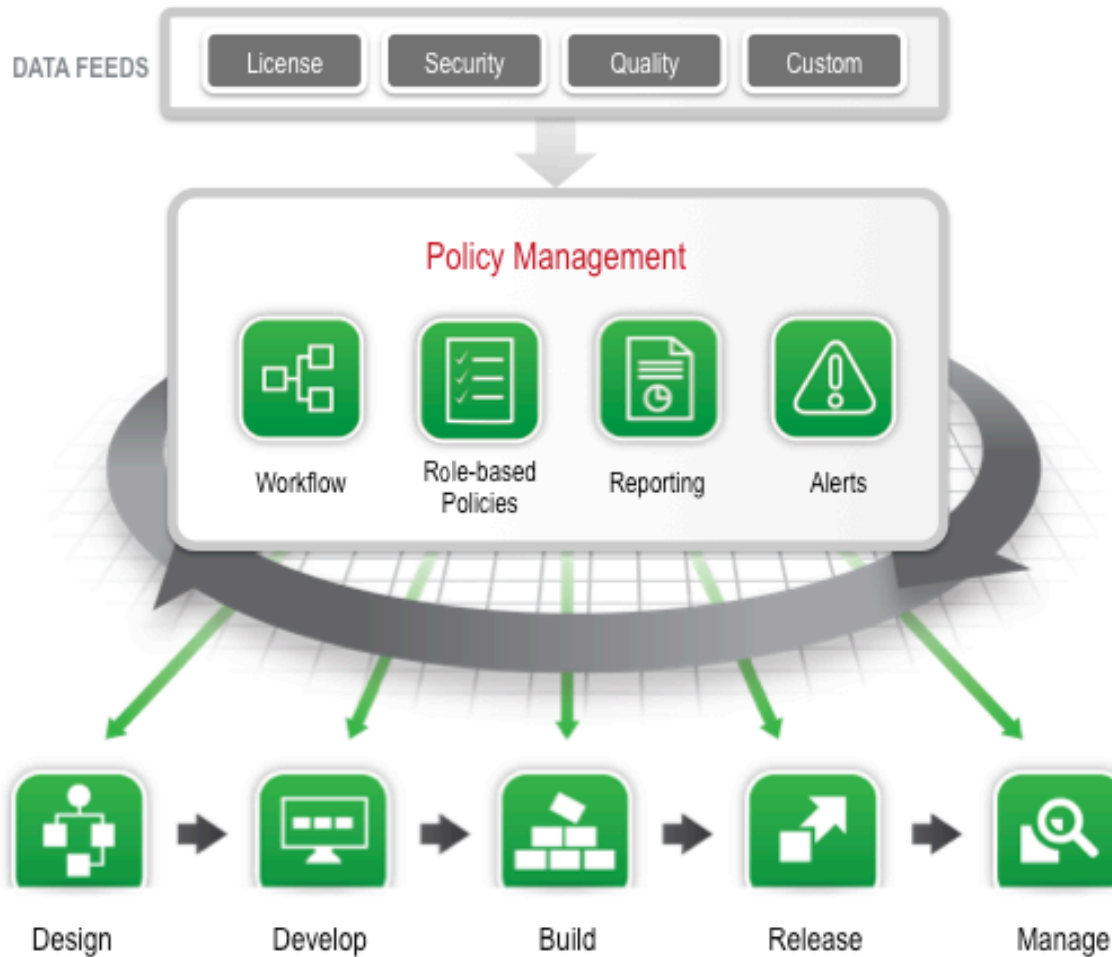

**A** Know how, when, and where components are consumed organization-wide to identify risks before they become a problem.

# Components Can be Compromised

# Automated Policy Management Throughout the Lifecycle

Centralized policy administration simplifies enterprise management

Lifecycle appropriate actions enforce policy automatically

- Need to recognize that the priorities are different
- Tooling needs to adopt the practice of the practitioner not the other way around
- A Tool is not a process and a process is not a tool; learn to leverage both.

# Go Fast. Be Secure.

**Build security in** from the start

**Enforce policy** in the tools you already use

**Reduce risk** by automating governance throughout the lifecycle

**Reduce cost** by fixing early in the process

**React to new threats** by knowing what they are and where to fix them

**Go fast** by using tools your developers already know

# THANK YOU!
